In this talk, Julian will first outline the concept of ‘just sustainabilities’, arguing that integrating social needs and welfare offers us a more ‘just,’ rounded, and equity-focused definition of sustainability and sustainable development, while not negating the very real environmental threats we face. The concept is defined as ‘the need to ensure a better quality of life for all, now and into the future, in a just and equitable manner, whilst living within the limits of supporting ecosystems.’

In this talk, Julian will first outline the concept of ‘just sustainabilities’, arguing that integrating social needs and welfare offers us a more ‘just,’ rounded, and equity-focused definition of sustainability and sustainable development, while not negating the very real environmental threats we face. The concept is defined as ‘the need to ensure a better quality of life for all, now and into the future, in a just and equitable manner, whilst living within the limits of supporting ecosystems.’ He will then look at examples of just sustainabilities in practice in the real world focusing on ideas about ‘fair shares’ in resource distribution globally; the potential in the new sharing economy and finally the concept of ‘spatial justice’ and how it complements the more established concept of social justice.

**FRIDAY, SEPTEMBER 19**
