ENERGY COMMITMENT
STATEMENT OF ACTION

We support SFU’s Sustainability Policy GP 38 in recognizing sustainability as an institutional priority for all University activities, and we commit to work to develop and adopt environmentally sustainable practices and processes in our operations.

We are proud of our long track record of pro-active energy management and we take the lead in implementing energy efficiency projects and in managing energy consumption. However, we know we must do more to accelerate our impact and in pursuing responsible solutions to meet the institutional need to reduce energy consumption and greenhouse gas emissions. Therefore, we commit to the following actions:

- We will reduce our total energy consumption by a minimum of 2% per year.
- We will develop achievable and practical plans to achieve our reduction goals.
- We will support the provincial goal of reducing greenhouse gas emissions by 33% (from 2007 levels) by 2020, to achieve the goal of 80% reduction by 2050.
- We will put in place rigorous measurement and verification procedures, and strive to be fully accountable for our actions.
- We will exercise leadership in engaging the university community to contribute to saving energy through behavioral change and educational events.

Signatory

Name Title: Dr. Patricia Hibbitts
Vice-President Finance and Administration
Simon Fraser University
