

How does  
this work?

We set up  
a 2-D array  
of charges  
like in  
Flatland.

Draw the flux lines  
between them and then  
draw a closed 2-D  
surface. Then you count  
up the flux and hope  
that Gauss' Law  
holds.

OK?

I meant,  
how do you  
start the program.
