

Technology, Modernity, and Democracy

Essays by Andrew Feenberg

Edited by Eduardo Beira and Andrew Feenberg

"Andrew Feenberg has done more than anyone else to develop a critical constructivism that ensures the relevance of critical theory to technology studies in the 21st century. This collection of essays is a fine crystallisation of that perspective and represents the ideal point of entry for anyone new to Feenberg's thought."

Graeme Kirkpatrick,
Head of Sociology,
University of Manchester

According to critical theory of technology, technologies are neither neutral nor deterministic, but are encoded with specific socio-economic values and interests. Andrew Feenberg explores how they can be developed and adapted to more or less democratic values and institutions, and how their future is subject to social action, negotiation and reinterpretation. This volume includes chapters on citizenship and critical theory of technology, philosophy of technology and modernity, and Heidegger and Marcuse, two of the most prominent philosophers of technology.
