digestion - the processing of food

nutrients - materials your body needs to stay alive and grow
- the cells also need water (liquids, fruit, vegetables)

Digesting an Apple

- The mouth - the beginning of the digestive system
 - teeth bite and chew food until mushy
 - tongue moves food around and mixes with saliva
- Esophagus - food and saliva moves down this long tube
 - runs from the mouth to your stomach
 - squeezes food so it moves to the stomach
- stomach - a pear shaped organ
 - chemical juices break down food to a thin, watery liquid

The Human Body

- is made up of many systems

1. Cells - smallest part of your body

- your body has billions and billions of cells 

2. Tissues - cells form tissues

- all the cells in a tissue are similar in shape and do a similar job in your body 

3. Organs - tissues form organs which carries out one or more jobs in your body

- ex. your stomach is an organ 

4. Systems - organs work together in body systems

- each system has one main job
- ex. stomach is one of the organs of the digestive system
