

STAT 330. Midterm 1 - Question 2
(October 7 - 9, 2020)

Name: _____

Student ID: _____

Q2.[20 points] Consider the experiment of flipping an *uneven* coin twice independently. Suppose the probability of getting a head with one flip is $1/3$. Answer the following questions.

- [5] (i) Write down the sample space of the experiment.
- [5] (ii) Let X_1 be the number of heads from the first flip; X_2 , the second flip. Give the joint pmf of (X_1, X_2) .
- [5] (iii) Let Y be the number of heads from the experiment: $Y = X_1 + X_2$. Obtain $E(Y)$ and $\text{Var}(Y)$.
- [5] (iv) If $W = X_1 X_2$, what is $\text{Cov}(Y, W)$?

Solution (i) $S = \{ (H, H), (H, T), (T, H), (T, T) \}$

(ii) All the possible values of X_1, X_2 are 0, 1.

The following table gives the joint pmf of X_1 and X_2 :

	x_2	1	0	
x_1	1	$(\frac{1}{3})(\frac{1}{3})$	$(\frac{1}{3})(\frac{2}{3})$	$P(1,1) = \frac{1}{9}$
$P(x_1, x_2)$	0	$(\frac{2}{3})(\frac{1}{3})$	$(\frac{2}{3})(\frac{2}{3})$	$P(1,0) = P(0,1) = \frac{2}{9}$
for $x_1, x_2 = 0, 1$				$P(0,0) = \frac{4}{9}$

(iii) $\because Y = X_1 + X_2$ $E(X_1) = E(X_2) = 1(\frac{1}{3}) + 0(\frac{2}{3}) = \frac{1}{3}$
 $E(X^2) = E(X_1^2)$ $V(X_1) = V(X_2) = 1(\frac{1}{3}) - (\frac{1}{3})^2 = \frac{1}{3}(\frac{2}{3}) = \frac{2}{9}$
 $\therefore E(Y) = 2/3$, $V(Y) = 2(\frac{2}{9}) = \frac{4}{9}$
 \uparrow
 $X_1 \text{ and } X_2$

(iv) $\text{Cov}(Y, W) = E(YW) - E(Y)E(W)$

$E(W) = E(X_1)E(X_2) = \frac{1}{9}$, $E(YW) = E(X_1^2 X_2 + X_1 X_2^2)$
 $= 2 E(X_1^2)E(X_2) = \frac{2}{9}$
 $\Rightarrow \text{Cov}(Y, W) = \frac{2}{9} - \frac{2}{3}(\frac{1}{9}) = \frac{4}{27}$
