2.61 Gate AB in Fig. P2.61 is a homogeneous mass of $180 \mathrm{~kg}, 1.2 \mathrm{~m}$ wide into the paper, resting on smooth bottom B. All fluids are at $20^{\circ} \mathrm{C}$. For what water depth $h$ will the force at point B be zero?

Solution: Let $\gamma=12360 \mathrm{~N} / \mathrm{m}^{3}$ for glycerin and $9790 \mathrm{~N} / \mathrm{m}^{3}$ for water. The centroid of

Fig. P2.61
$A B$ is 0.433 m vertically below A , so hCG $=2.0-0.433=1.567 \mathrm{~m}$, and we may compute the glycerin force and its line of action:

$$
\begin{aligned}
& \mathrm{F}_{\mathrm{g}}=\gamma \overline{\mathrm{h}} \mathrm{~A}=(12360)(1.567)(1.2)=23242 \mathrm{~N} \\
& \mathrm{y}_{\mathrm{CP}, \mathrm{~g}}=-\frac{(1 / 12)(1.2)(1)^{3} \sin 60^{\circ}}{(1.567)(1.2)}=-0.0461 \mathrm{~m}
\end{aligned}
$$

These are shown on the freebody at right. The water force and its line of action are shown without numbers, because they depend upon the centroidal depth on the
 water side:

$$
\begin{aligned}
\mathrm{F}_{\mathrm{w}} & =(9790) \mathrm{h}_{\mathrm{CG}}(1.2) \\
\mathrm{y}_{\mathrm{CP}} & =-\frac{(1 / 12)(1.2)(1)^{3} \sin 60^{\circ}}{\mathrm{h}_{\mathrm{CG}}(1.2)}=-\frac{0.0722}{\mathrm{~h}_{\mathrm{CG}}}
\end{aligned}
$$

The weight of the gate, $\mathrm{W}=180(9.81)=1766 \mathrm{~N}$, acts at the centroid, as shown above. Since the force at B equals zero, we may sum moments counterclockwise about A to find the water depth:

$$
\begin{aligned}
\sum \mathrm{M}_{\mathrm{A}}=0= & (23242)(0.5461)+(1766)\left(0.5 \cos 60^{\circ}\right) \\
& -(9790) \mathrm{h}_{\mathrm{CG}}(1.2)\left(0.5+0.0722 / \mathrm{h}_{\mathrm{CG}}\right)
\end{aligned}
$$

Solve for $\mathrm{h}_{\mathrm{CG}, \text { water }}=2.09 \mathrm{~m}$, or: $h=\mathrm{h}_{\mathrm{CG}}+0.433=\mathbf{2 . 5 2} \mathbf{~ m}$ Ans.
2.62 Gate AB in Fig. P2. 62 is 15 ft long and 8 ft wide into the paper, hinged at B with a stop at A . The gate is 1 -in-thick steel, $\mathrm{SG}=7.85$. Compute the $20^{\circ} \mathrm{C}$ water level $h$ for which the gate will start to fall.

Solution: Only the length $\left(h \csc 60^{\circ}\right)$ of

Fig. P2.62 the gate lies below the water. Only this part
