

*Figure 3 — Dr. Howard Trottier took this image of NGC 4565 from his “Cabin in the Sky” Observatory under very dark skies in the South Okanagan Valley in April. He used a PlaneWave CDK17 telescope at f/4.5 equipped with an SBIG STL-4020M camera. Exposure was 6 hours in LRGB wavelengths over a three-day period. NGC 4565 is an edge-on galaxy that lies at a distance of 30-50 million light-years in Coma Berenices.*
