Conductor

The mikes are fed to the mixing console, preferably placed centrally in the hall, and mixed with the stereo tape, played from digital audio tape, and sent to four, six, or eight loudspeakers in the hall surrounding the audience at approximately equal distance. A digital delay / reverb unit may optionally be added to the mix if the hall has a dry acoustic. Also, if sufficient channels are available, all 12 instruments can be miked ( the minimum configuration with 10 mikes is shown above ). The mixing console is run by a tape operator whose task it is to balance the live and tape parts into a coherent whole where each may be heard equally. Monitor speakers ( foldback ) should be placed near the conductor and performers to help make the tape audible to everyone.
