Waste to Energy: Low Carbon Future?

Waste to energy is a popular solution in Europe and has been proposed as a potential option for managing solid waste and generating electricity in Metro Vancouver. However, does incineration fit in with a low-carbon future? How do we rectify the conflicting values of reducing waste and providing a reliable energy source? Does waste to energy mitigate or contribute to climate change?

Join us at our next public Carbon Talk
When: Tuesday, June 24, 12:30—1:30PM
Where: Room 1600, SFU Harbour Centre
Registration: www.carbontalks.ca/dialogues/public

Paul Richard
Chair, Environmental Protection Technology at Kwantlen Polytechnic

Douw Steyn
Professor, Department of Earth Ocean and Atmospheric Sciences, UBC
