Every year in Tanzania **7900 women die** from pregnancy and childbirth-related complications. Concurrently, **98,000 children died before the age of 5 years** with **40,000** of these deaths occurring within the first month of life.

My practicum placement was in Tanzania working with an organization called Totohealth Tanzania that works to improve maternal and child health survival in Tanzania. Totohealth Tanzania has:

- **The Vision** of a world where no woman dies giving life and where every child has a fair and equal start in life.
- **The Mission** of making motherhood safe and joyful experience.

At the end of my practicum with the great support from the team at Totohealth, I was able to develop the following:

- Resources for the feasibility study including the postnatal visits checklist, Swahili translation of interview questionnaires, and a process map for the mHealth user journey.
- Report and presentation of the feedback study analysis to the team at Totohealth and during the Annual Donor Review meeting.

I was also involved in other projects within Totohealth that enhanced my learning experience including development of a grant database, and planning for stock management tracking system.

**ACKNOWLEDGEMENT**

I would like to extend my deep appreciation to my practicum preceptor Giulia Besana for her endless support throughout my practicum and for the opportunities that enhanced my skills and knowledge in Public Health. I also would like to thank Kate Carty for her support in ensuring my practicum is successful. This was an exceptional opportunity.
