**Thomas L. Patterson, Ph.D.,** is Professor of Psychiatry at University of California, San Diego, and has been conducting psychosocial and behavioral research with HIV+ and at-risk populations since 1989. He has been the principal investigator on several NIH-funded grants to test the efficacy of theory-based behavioral interventions to increase condom use and decrease HIV and STI transmission in methamphetamine users (both HIV-positive MSM and HIV-negative male and female heterosexuals) in the U.S., female sex workers in Mexico and India, and male clients of female sex workers in Tijuana, Mexico. In 2015, Dr. Patterson completed a multi-site implementation study of his efficacious, single-session HIV prevention intervention for female sex workers at 13 community clinics spread across Mexico. His current projects include two five-year studies funded by the National Institute on Drug Abuse. One will examine HIV transmission networks among MSM in Tijuana using both viral genetic and self-reported social network data, and the other will test the efficacy of a theory-based text-messaging program to sustain safer-sex behaviors in female sex workers in Tijuana and Ciudad Juarez.

Dr. Patterson has written or coauthored over 550 articles and book chapters, was a founding editor of *AIDS and Behavior,* and has served on a number of scientific review panels and advisory committees.
