### Course Announcement: Math 402W

Spring 2018. TuTh 10:30-12:30, SUR 2980.

The Operations Research Clinic (Math 402W) is unlike any math class you have taken before. You and your team will apply your skills to analyze problems of current local interest.

Each of the first three editions of this course produced the winning project in the national Canadian Operations Research Society’s [undergraduate student paper competition](http://www.coscanada.org/), along with other honourable mentions and finalists. Project topics have included studying tolling on Vancouver-area bridges, location planning for food trucks, traffic light sequencing in downtown Vancouver, and queueing for refugee services.

For further information on this course, please e-mail the instructor, Tamon Stephen, tamon at sfu dot ca.
