

## MEMORANDUM

To Senate

From Senate Committee on  
Undergraduate StudiesSubject New Courses and Changes:  
Computing Science

Date November 23, 1977

Action taken by the Senate Committee on Undergraduate Studies at its meeting of November 22, 1977, gives rise to the motions:

MOTION I

That the proposed new courses, CMPT 110-3 (Introduction to Computation in the Humanities) and CMPT 380-3 (Computational Linguistics), as set forth in S.77-160, be approved and recommended to the Board for approval.

NOTE - The two courses proposed are intended to replace CMPT 280-3 (Computation in the Humanities I) and CMPT 380-3 (Computation in the Humanities II - The Computer and the Humanist). There has now been extensive consultation between the originator of the course, Professor Cercone, and Professor Roberts, representative of Linguistics and Chairman of the Faculty of Arts Curriculum Committee. This consultation focussed on making the courses maximally useful to students in such fields as Linguistics.

MOTION 2

That the proposed changes in course description, prerequisite, and title, as set forth in S.77-160, be approved and recommended to the Board for approval. Specific changes proposed are as follows:

Change in Description  
CMPT 118-3

Change in Prerequisite  
CMPT 201-4  
CMPT 240-3  
CMPT 250-3  
CMPT 283-3  
CMPT 290-3  
CMPT 291-3

November 23, 1977

Change in Title and Description

CMPT 301-3

CMPT 302-3

CMPT 351-3

Change in Description and Prerequisite

CMPT 400-3

Change in Description

CMPT 401-3

Change in Description and Prerequisite

CMPT 410-4

Change in Title, Description and Prerequisite

CMPT 411-5

CMPT 412-5

CMPT 413-5

Change in Title and Prerequisite

CMPT 451-3

Change in Title

CMPT 493-1

Change in Title and Prerequisite

CMPT 494-1

MOTION 3

That the proposed change in Lower Division Requirements for Majors and Honours in Computing Science, as set forth in S.77-160, be approved and recommended to the Board for approval.

MEMORANDUM

To..... John Dickenson, Chairman

From.....

N. Cercone

..... Fac. of Interdisciplinary Studies  
..... Undergraduate Curriculum Committee

Subject CMPT 110, CMPT 380

Date.....

November 14, 1977.

On 4 November, 1977 a meeting was held between T. Calvert (Dean of Interdisciplinary Studies), W. Roberts (Linguistics), and myself to discuss the CMPT 110 and CMPT 380 course proposals. As a result of that meeting the course outlines were modified and shortened to bring them closer in line with the content I envisaged. The nature of the changes for the most part involve a scaling down in the number of topics to be presented in each course and to allow provision for further investigations by students in complementary programs.

cc. T. Calvert

## Calendar Description

### Introduction to Computation in the Humanities

CMPT 110-3

(3-1-0)

This course is designed to present the student with an overview of the techniques, methodology, and use of computers in ~~humanistic~~ <sup>the humanities</sup> work. Students will be introduced to the concepts of several programming languages with emphasis on the uses to which they have been put for various types of humanistic research.

Note: Students will be expected to work on individual projects. In exceptional cases a group project may be sanctioned. Topics for projects can be picked by the student (after consultation) or may (by default) be assigned. In addition, one exam (take home, open notes, essay-type) will be given sometime toward the end of the term, and several homeworks will be assigned.

# Introduction to Computation in the Humanities

## Course Outline

### Week    Material

- 1      Artificial Intelligence and its relationship to the humanities: what is Artificial Intelligence [AI]; AI research methods; the future.
- 2-4    Introduction to programming languages for humanistic endeavours: basic constructs, examples, structures, and uses of PL/1, LISP, SNOBOL (SPITBOL), ALGOL (ALGOLW, PASCAL).
- 5-6    Text Processing; classical methods of text processing (data representation, various kinds of indices, concordances and frequency counts, etc.); editing; concordances; cryptography; stylistic description; authorship attribution; style analysis.
- 7-8    Machine Dictionaries: goals and functions in linguistic research; compiling, look-up; updating; survey of existing dictionaries; word morphology.
- 9      Simple parsing without complete sentence analysis.
- 10-11   Data Base Concepts: Data Base storage and structure; data retrieval; bibliographies; catalogues; thesauruses; archives; interactive use of data bases; information retrieval systems; organisation.
- 12     Selected discussions from the following topics (suitable for term paper projects):: Text processing in Law; Computer produced braille; The computer in art and visual display; Computer analysis, synthesis, and composition in music; Computer generated stories; Quantative methods in non-verbal oriented research including history, archeology, fine arts, and music;

## Calendar Description

### Computational Linguistics

CMPT 380-4

(3-1-0)

This course examines the theoretical and applied problems of constructing and modeling systems, which aim to extract and represent the meaning of natural language sentences or of whole discourses, by drawing on contributions from the fields of linguistics, artificial intelligence, and computing science.

Note: Students will be expected to work on individual projects. In exceptional cases a group project may be sanctioned. Topics for projects can be picked by the student (after consultation) or may (by default) be assigned. In addition, one exam (take home, open notes, essay-type) will be given sometime toward the end of the term, and several homeworks will be assigned.

## Computational Linguistics

### Course Outline

#### Week    Material

- 1        Introduction to computational linguistics: history, aims, results, and applications.
- 2-4     Methodology: computing, linguistic, and mathematical foundations of computational linguistics; software (including LISP programming); tools.
- 5-6     Knowledge Representations: declarative and procedural knowledge; logic; semantic networks; frames, scripts, plans, schemata; models stressing intensional and extensional representations.
- 7        Introduction to Grammatical Processing: computational techniques for transformational, relational and transition-network grammars; computational models of psychological processes.
- 8        Reasoning and Inference procedures: survey of recent work in artificial intelligence in relation to language and cognitive simulation; reasoning from incomplete knowledge; heuristic methods of improving inference.
- 9        Discourse and conversational modeling: analysis and synthesis procedures; control structures, actors, demons, embedded procedural attachment of knowledge.
- 10      Descriptions of working natural language understanding systems: the role of their components; difficult or unsolved problems.
- 11      Speech Recognition and Speech Understanding: review of actual projects; special requirements of components of continuous speech understanding systems.
- 12      Applications: actual and perspective applications of computational linguistics.

## MEMORANDUM

To..... Nick Cercone,  
Computing Science.

From..... Ch. P. Bouton,  
Chairman,  
Department of Modern Languages.

Subject..... CMPT 380 Proposal.

Date..... October 11, 1977.

After consultation with the Linguistic Division of this Department, this is to let you know that there is no overlap between our program and your course proposal, at least not at the undergraduate level. Our computational linguistic course is in the Calendar at the graduate level.

On the other hand, may I again tell you that we would be most pleased if you would give a talk to our graduate students at our Linguistics Colloquium.

From David G. Kirkpatrick, Chairman  
Computing Science Program  
Undergraduate Curriculum Committee

Subject COURSE PROPOSAL FORMS

Date November 4, 1977

Attached are New Course Proposal Forms detailing changes in Course Title/Calendar Description/Prerequisites for the following courses: CMPT 118-3, CMPT 201/4, CMPT 240-3, CMPT 250-3, CMPT 283-3, CMPT 290-3, CMPT 291-3, CMPT 301-3, CMPT 302-3, CMPT 351-3, CMPT 400-3, CMPT 401-3, CMPT 410-4, CMPT 411-5, CMPT 412-5, CMPT 413-5, CMPT 451-3, CMPT 493-1 and CMPT 494-1.

These changes were approved at the Faculty of Interdisciplinary Studies Undergraduate Curriculum Committee meeting of November 1, 1977. The rationale for individual changes is presented in the attached memorandum which is a revision of my memorandum of October 14th on CALENDAR CHANGES.

I trust this material will be appropriate for forwarding to SCUS.

David G. Kirkpatrick, Chairman  
From Computing Science Program  
Undergraduate Curriculum Committee

Subject CALENDAR CHANGES

Date November 4, 1977

The attached 1977/78 Calendar Tear sheets contain recommended changes in the Computing Science portion of the Undergraduate Calendar as approved by the Computing Science Program. These are submitted for approval by the Faculty of Interdisciplinary Studies Undergraduate Curriculum Committee and forwarding to SCUS. The following is a summary, with rationale, of the proposed changes.

### NEW COURSES

CMPT 205-3 INTRODUCTION TO FORMAL TOPICS IN COMPUTING SCIENCE ) Included for information  
CMPT 293-3 INTRODUCTION TO MINICOMPUTERS & MICROPROCESSORS ) only (courses were ap-  
CMPT 315-2 ADVANCED SOFTWARE PROJECT ) proved by Senate in Oct.)

CMPT 110-3 INTRODUCTION TO COMPUTATION IN THE HUMANITIES

This is intended to replace CMPT 280-3. New course proposal form is attached.

CMPT 380-3 COMPUTATIONAL LINGUISTICS

This is intended to replace the current CMPT 380-3. New course proposal form is attached.

### CHANGES IN COURSE TITLE/CALENDAR DESCRIPTION/PREREQUISITES

Attached New Course Proposal Forms detail all of the following changes.

CMPT 118-3 - calendar description changed.

Rationale: The present calendar description is misleading. Students are lead to believe that some combinations of the courses CMPT 121 through 186 serve as an alternative (in fact, encouraged alternative) to CMPT 118. In practice, few of the courses CMPT 121 through CMPT 186 are offered on a regular basis. Furthermore, CMPT 118 has evolved in such a way that, while it remains fundamentally a project oriented course, a number of concepts have come to be regularly introduced in its context. The new calendar description indicates the concepts that are emphasized in CMPT 118.

CMPT 201-4, 240-3, 250-3, 283-3 - in prerequisites "at least two credits in Computing Projects in the Arts and Sciences" has been changed to CMPT 118-3.

Rationale: This is in keeping with our modification in CMPT 118-3 and our recognition that combinations of courses drawn from CMPT 121 through CMPT 186 do not serve as an alternative to CMPT 118.

CMPT 290-3 and 291-3 - changes in prerequisites (special instructions) and changes in Physics prerequisite for CMPT 291.

Rationale: Notes have been added as special instructions to ensure that students do not attempt to take both CMPT 290 and 291 for credit. (No students have been permitted to do so in the past.)

The change in CMPT 291 prerequisite from PHYS 204 to PHYS 150-3 is in response to the replacement in Physics of PHYS 204 by PHYS 150-3, the latter being designed specifically for students intending to take CMPT 291.

CMPT 301-3 - change in title and calendar description  
CMPT 302-3 - " " " " " "  
CMPT 351-3 - " " " " " "  
CMPT 400-3 - " " calendar description and prerequisite  
CMPT 401-3 - " " " " "  
CMPT 410-4 - " " " " and prerequisites  
CMPT 451-3 - " " title and prerequisites

Rationale: In all cases course title and calendar description changes are intended to reflect more accurately the content of the course as it is being offered. In no cases do these modifications represent substantial departures from the original intent of these courses.

The prerequisite changes are designed to take advantage of the recently introduced CMPT 205-3 and to ease the prerequisite structure which was making some of our highest level courses inaccessible to certain of our students.

CMPT 411-5, 412-5, 413-5 - changes in title, calendar description and prerequisites

Rationale: The title and calendar description is intended to clarify the nature of the practicum sequence. The added prerequisite specifies in writing the requirements that have been applied to date. It also makes the practicum courses sequential (already implied in the title) which makes it clear to students that they are not mutually exclusive.

CMPT 493-1 and 494-1 - changes in title and prerequisite

Rationale: The simplification of the title removes the possible suggestion that these colloquia are not restricted to issues in Computing Science. The prerequisite change makes the colloquia sequential (already implied in the title) which makes it clear to students that they are not mutually exclusive.

CHANGES IN LOWER DIVISION COURSE REQUIREMENTS FOR MAJORS AND HONORS IN COMPUTING SCIENCE

Present requirements: CMPT 103-3 - INTRODUCTION TO A HIGH LEVEL PROGRAMMING LANGUAGE I  
CMPT 105-3 - FUNDAMENTAL CONCEPTS OF COMPUTING  
Three credits in Computing Projects in the Arts and Sciences  
CMPT 201-4 - Data and Program Organization  
CMPT 260-3 - SOCIAL IMPLICATIONS OF A COMPUTERIZED SOCIETY

Proposed additional requirements: CMPT 118-3 - COMPUTING PROJECTS IN THE ARTS AND SCIENCES  
(replacing "Three credits in Computing Projects in the Arts and Sciences")  
CMPT 205-3 - INTRODUCTION TO FORMAL TOPICS IN COMPUTING SCIENCE  
CMPT 290-3 - INTRODUCTION TO DIGITAL SYSTEMS  
or CMPT 291-3 - ANALOGUE AND DIGITAL CIRCUITS  
MATH 101-3 - INTRODUCTION TO STATISTICS  
MATH 151-3 - CALCULUS I  
MATH 152-3 - CALCULUS II

Rationale: Our additional requirements stem from two sources:

- 1) It has been recognized for some time now that the mathematical background of many of our students is less than adequate both in preparation for our higher level courses and in terms of general problem solving skills. It is felt that this situation has resulted in part from our lack of insistence on mathematics prerequisites for certain courses and in part by our failure to encourage students to develop a working knowledge of general mathematical techniques.

CMPT 205-3 has been introduced to expose students to elements of discrete mathematics and their applications within Computing Science. This lays a foundation for the study of the theoretical aspects of Computing Science.

MATH 101-3, MATH 151-3, and MATH 152-3 - have been chosen as courses that provide a minimally adequate background in statistics and calculus.

- 2) CMPT 290-3 (or CMPT 291-3) has been proposed as a prerequisite for CMPT 400-3. Since CMPT 400 is a required upper level course for all Majors and Honors students CMPT 290-3 (or CMPT 291-3) is being listed as a lower division requirement.

In addition to the above requirements we have listed as "strongly recommended" and "recommended" respectively, the courses MATH 232-3 and PHIL 210-3. Elements of Linear Algebra, in particular, play a significant role in some of the courses. MATH 371-3 is specified as a recommended alternative to MATH 101-3 for students contemplating taking certain of our upper levels courses (CMPT 305-3, CMPT 360-3, or CMPT 404-4.)

COURSE PROPOSAL FORM1. Calendar InformationDepartment: Computing ScienceAbbreviation Code: CMPT Course Number: 302 Credit Hours: 3 Vector: Title of Course: System Development Projects

Calendar Description of Course: The concepts taught in CMPT 301-3 are applied in this course by assigning the student a project to develop a computer application system. The student is expected to prepare written and oral presentations covering the critical phases of project development-proposal, detailed design, status reporting, and implementation.  
(Lecture/Tutorial)

## Nature of Course

## Prerequisites (or special instructions):

Students with credit for CMPT 302 under its former title cannot take this course for further credit.

What course (courses), if any, is being dropped from the calendar if this course is approved:

2. Scheduling

How frequently will the course be offered?

Semester in which the course will first be offered?

Which of your present faculty would be available to make the proposed offering possible?

3. Objectives of the Course4. Budgetary and Space Requirements (for information only)

What additional resources will be required in the following areas:

Faculty

Staff

Library

Audio Visual

Space

Equipment

5. ApprovalDate: 11/4/777 Nov 7722/11/77

COURSE PROPOSAL FORM

1. Calendar Information

Department: Computing Science

Abbreviation Code: CMPT Course Number: 351 Credit Hours: 3 Vector:       

Title of Course: Introduction to Computer Graphics

Calendar Description of Course:

An introduction to concepts and techniques of computer graphics. Topics include graphic display hardware, input devices and functions, plotting and mapping algorithms, picture processing, graphic data structures, display algorithms, 2D and 3D graphic transformations and applications. (Lecture/Tutorial)

Nature of Course

Prerequisites (or special instructions):

Students with credit for CMPT 351 under its former title cannot take this course for further credit.

What course (courses), if any, is being dropped from the calendar if this course is approved:

2. Scheduling

How frequently will the course be offered?

Semester in which the course will first be offered?

Which of your present faculty would be available to make the proposed offering possible?

3. Objectives of the Course

4. Budgetary and Space Requirements (for information only)

COURSE PROPOSAL FORM

1. Calendar Information Department: Computing Science  
Abbreviation Code: CMPT Course Number: 400 Credit Hours: 3 Vector:       

Title of Course: Hardware-Software Architecture I

Calendar Description of Course:

This course explores the functional behavior and underlying structures of computer systems. Topics include evolution of computer architectures, memory organizations, microarchitectures, virtual memories, microprogramming, stack machines, pipelined processors, array processing and protection. (Lecture)

Nature of Course

Prerequisites (or special instructions):

CMPT 201-4, CMPT 205-3, and CMPT 290-3 or CMPT 291-3.

What course (courses), if any, is being dropped from the calendar if this course is approved:

2. Scheduling

How frequently will the course be offered?

Semester in which the course will first be offered?

Which of your present faculty would be available to make the proposed offering possible?
