

List of Figures

1.1	Scattering of an α -particle on a positive nucleus.	12
1.2	Path of an α -particle in the scattering process on a positive nucleus. . .	13
1.3	A change in the incoming impulse $\Delta\mathbf{p}$ is taking place along the z axis for Coulomb scattering.	14
1.4	Change of the scattering angle with the impact parameter.	16
1.5	A string of longitudinal oscillators	28
1.6	Nucleon-nucleon scattering in the center of momentum frame	34
1.7	Spherical Bessel functions of low order	34
3.1	Domains of integration	76
3.2	The spatial part of an orthonormal tetrad in cylindrical coordinates. . .	106
3.3	The scattering process where incoming asymptotically free particles carry momenta	126
3.4	The scattering process corresponding to the first contribution I	129
3.5	Shifted poles in the lower half-plane so the real p_0 axis is free of singularities	134
3.6	Closures of various contours for integration	135
3.7	Closures of contours for integration	138
3.8	Shifted singularities for integration	140
3.9	Closures of contours for integration	141
3.10	Two singularities of the contour integration	146
3.11	The contour of integration C^+	147
3.12	The poles $k_0 = \pm \mathbf{k} $ are shifted by the small parameter ϵ and the contour along the k_0 axis	149
3.13	The various vectors required to compute the potential of a moving charge	151
3.14	photon-electron scattering	154
3.15	Feynman diagrams for Compton scattering	156
3.16	Compton scattering at first-order and a QED vertex	160
3.17	Photon scattering off of a stationary electron	165
4.1	A general scattering process $p_a + p_b \rightarrow p_1 + p_2$	172
4.2	The two possible bremsstrahlung diagrams	178
4.3	Scattering in the center-of-mass (COM) frame.	189
4.4	Muon-neutrino electron inelastic scattering in the four fermion version of the current-current interaction.	194
4.5	Electron - muon neutrino scattering by W^- exchange.	200

4.6	Electron scattering on the Coulomb field of a heavy nucleus of charge $+Ze$	212
4.7	Muon-neutrino electron elastic scattering	218
4.8	Compton scattering diagram	224
4.9	Pion Compton scattering in scalar QED.	226
4.10	Transversal polarization vectors for the incoming and the scattered photons.	229
4.11	Decay of the scalar particle to a fermion-antifermion pair.	232
4.12	Pion emission in two reference frames	235
4.13	The neutral pion π^0 decay into two photons	237
4.14	Muon decay by W^- exchange.	241
4.15	Muon decay approximated by a four fermion interaction.	241
4.16	Charged pion decay into a lepton-antilepton pair.	252
5.1	A one dimensional Mexican hat potential	265
5.2	Probability density for the Mexican hat potential	267
5.3	Classical solution to the Euclidean equation of motion	268
5.4	The transport of a vector around a closed loop on a surface	307
5.5	Perturbation direction of the field about the potential's minimum.	315
5.6	Electron capture reaction	319
6.1	Møller scattering at tree level.	327
6.2	Electron - muon scattering.	330
6.3	Scattering of an electron on a (stationary) proton in the second order of perturbation theory	335
6.4	Vertex correction diagram contributing to the electron's anomalous magnetic moment.	358
6.5	A scalar QED process in which a photon is emitted from an incoming external leg.	365
6.6	A scalar QED process in which a photon is emitted from an outgoing external leg.	366
6.7	A 3-fermion triangle diagram in QED	374
6.8	A set up to illustrate the Casimir effect.	375
6.9	Perpendicular and parallel modes in the Casimir effect	377
7.1	One of several possible glueball radiative decays	395
7.2	A quark-quark-gluon vertex.	399
7.3	A trivalent gluon vertex.	400
7.4	A ghost-ghost-gluon vertex.	403
7.5	A quadrivalent gluon vertex.	405
7.6	Quark-anti-quark annihilation in QCD	414
7.7	Quark-anti-quark annihilation yielding a ghost and an anti-ghost	414
7.8	The root diagram for $su(3)$	436
7.9	The weight diagram for $su(3)$ in the $\mathbf{3}$ and $\bar{\mathbf{3}}$ representations.	439
7.10	Isospin (I_3) and hypercharge (Y) of u , d and s quarks.	441
7.11	Baryon triplet diagram for the proton, neutron and Λ^0	443

7.12	Tree-level quark-anti-quark scattering	444
7.13	Quark-gluon vertex	449
7.14	Quark-quark scattering via the t -channel with one gluon exchange	449
7.15	Quark-quark scattering via u -channel with one gluon exchange	451
7.16	The electron-positron annihilation to Z^0 and Higgs.	456
7.17	The electron-positron WW -fusion to $\nu\bar{\nu}H$ and Higgs.	465
8.1	A pictorial representation of the coincident Green functions.	479
8.2	Gauge orbits for a toy model	489
8.3	Free propagators in an interacting theory	510
8.4	Aharonov-Bohm apparatus setup	513
8.5	Aharonov-Bohm setup illustrating one path per slit.	515
9.1	A possible channel for proton decay in SU(5) theory.	520
9.2	The decay of the proton via the reaction $p^+ \rightarrow \pi^0 + e^+$	521
9.3	A Dirac mass and Majorana mass vertex.	529
9.4	The decay of two neutrons via the reaction $2n \rightarrow 2p + 2e^-$	530
9.5	When forming a deuterium, a proton undergoes an induced weak decay to become a neutron.	531
9.6	The two domains of the corresponding monopole vector potentials.	543
9.7	An illustration of the quantities in Kirchoff's diffraction integral.	546
9.8	A sample intensity pattern from the electric field of Kirchoff's diffraction integral.	548
9.9	An open and closed string propagating in a D -dimensional background spacetime.	549
9.10	A scalar particle emitting a spin-2 particle.	558
AI.1	A function that is zero except at discrete points.	567
AIII.1	An upper and lower contour in the complex plane.	585
AIII.2	The sine function and an intersecting straight line	585
AIII.3	A closed contour and singularities in the complex plane.	588
AIII.4	A closed contour encompassing singularities in the complex plane.	589
