

Contents

0	Notation and conventions	1
1	Low-Energy Classical and Quantum Processes	11
2	Special Relativity	35
3	Basics of Field Theories: Classical, Quantum and Effective	69
4	Classical and Quantum Field Theoretic Kinematics and Dynamics	171
5	Symmetries and Conservation Laws	264
6	Quantum Electrodynamics	326
7	Non-abelian Gauge Theory and Quarks	383
8	Path Integrals	466
9	Miscellaneous	517
	Appendix-I The Dirac delta “function”	566
	Appendix-II A Brief Overview of Groups, Representations, and Algebras	572
	Appendix-III Contour Integration and the Residue Theorem	584
	Appendix-IV A Brief Review of Grassmann Quantities	591
	Appendix-V The Multi-dimensional Gaussian Integral	597
	References	601
