PROBLEM SET 1 - CURRENT ACCOUNT DYNAMICS
(Due January 28)

1. Do Exercises 2 and 3 from Chpt.1 of Obstfeld & Rogoff (pgs. 55-56).
2. Do Exercises 6 and 8 from Chpt. 2 of Obstfeld & Rogoff (pg. 126).
3. Using the data on the webpage, and whatever software you want, report plots of the nominal and real exchange rates (relative to the U.S.) for the U.K., Japan, and Canada (use GDP deflators for the price levels). Next, report plots of the current account, as a fraction of GDP, for the U.S., U.K, Japan, and Canada.
4. Pick a country, and following the procedure outlined on pages 90-93 of the Obstfeld-Rogoff text, test the Present-Value Model of the current account (i.e., test the model's implied cross-equation restrictions). Plot the model's predicted current account against the actual current account. Comment on the model's fit. (Note: Be sure to express everything in real terms. Although variables should also be expressed in per capita terms as well, don't worry about that. It shouldn't make much of a difference here).
